# SAATI is Laser Focused on Textile Excellence

SAATI's Breakthrough 3.0 LTS E70B for Textile  
Stencil Making Launches at Printing United 2025

FOR THE MANY, BY THE FEW

—SAATI

# LTS 3.0 is set to blow the doors off Printing United

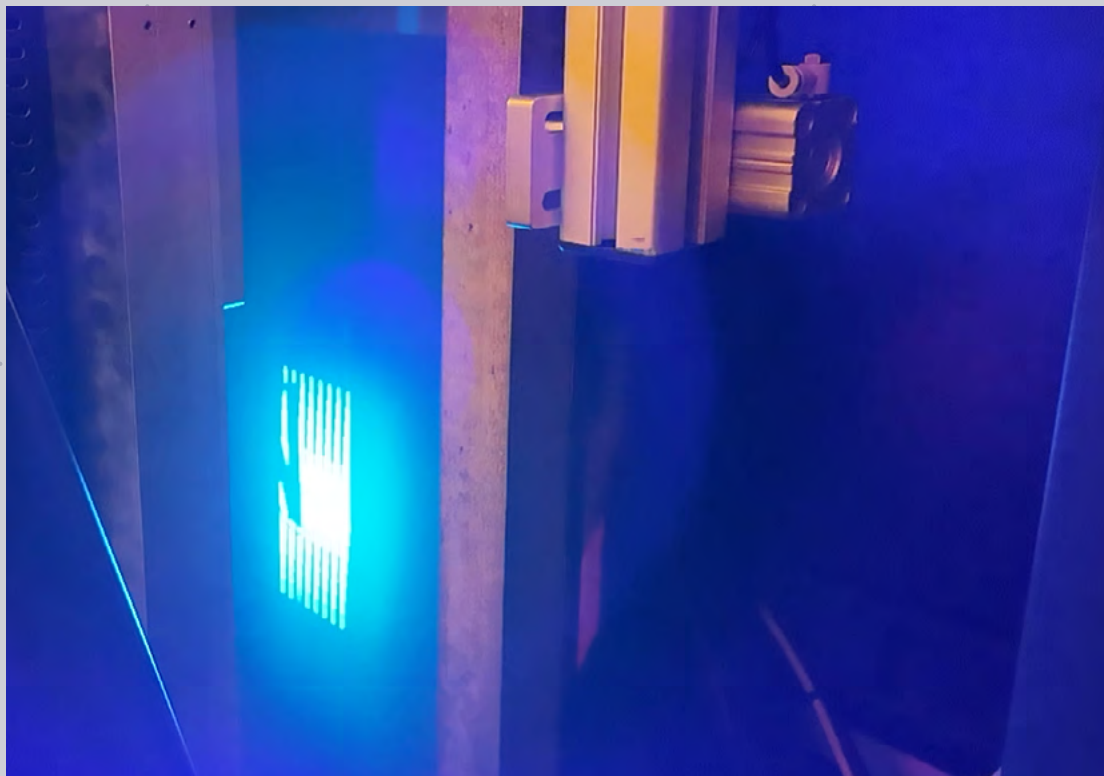

SAATI's award winning LTS Series is powered by relentless self-enhancement based on feedback from a broad customer base.

The latest innovation marks the the arrival of the LTS 3.0 technology, and the first entry in this exciting new line is the LTS E70B.

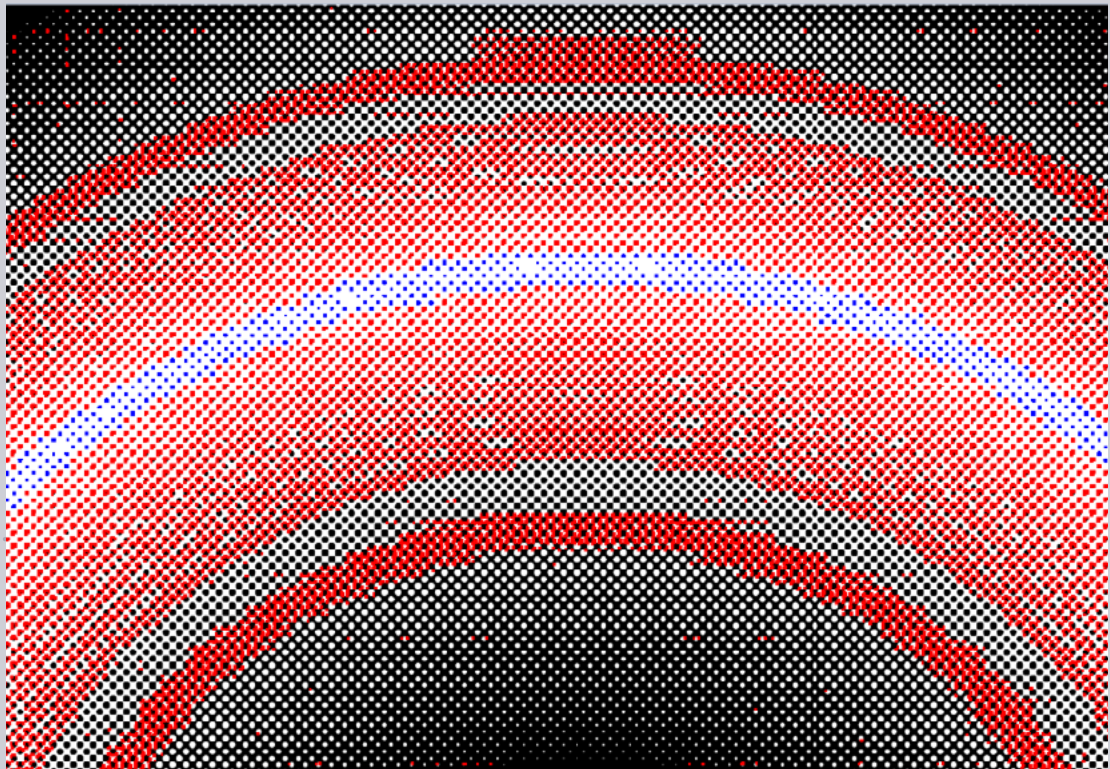

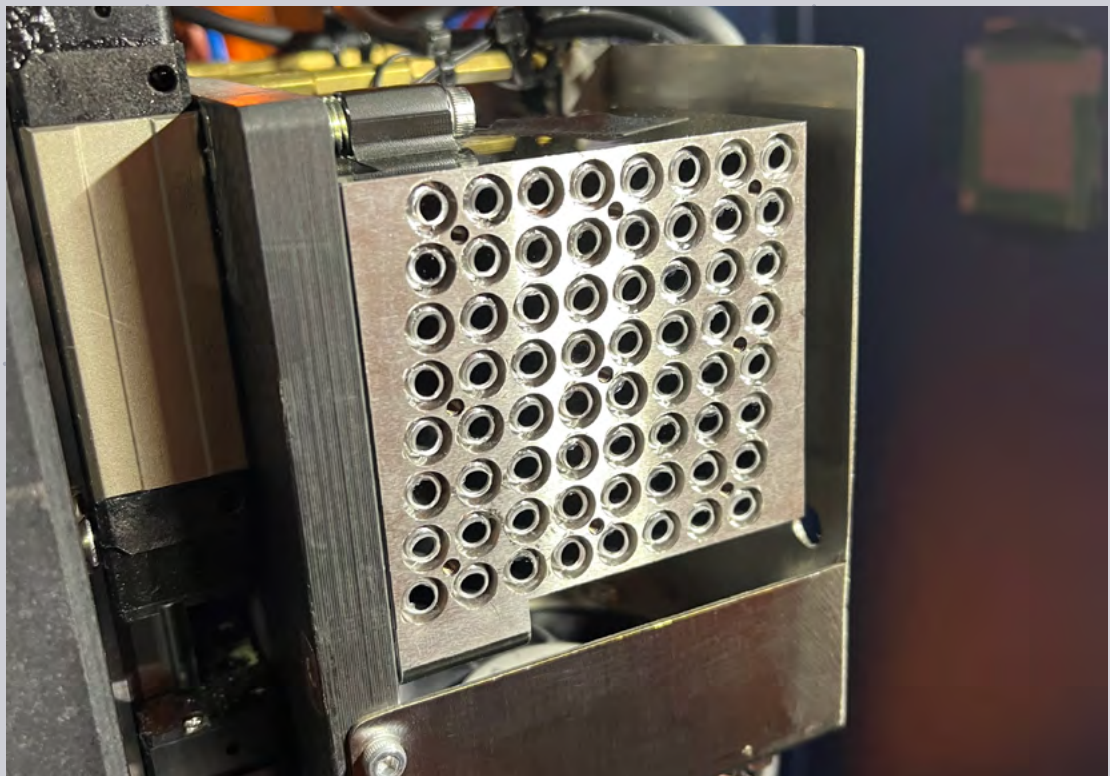

# Planar Array & AI Art Tools

The new **Planar Laser Array** and continuous software improvements are the crucial components that are described as the LTS 3.0 platform.

AI processing tools calibrate precise pixel placement to generate optimized image output

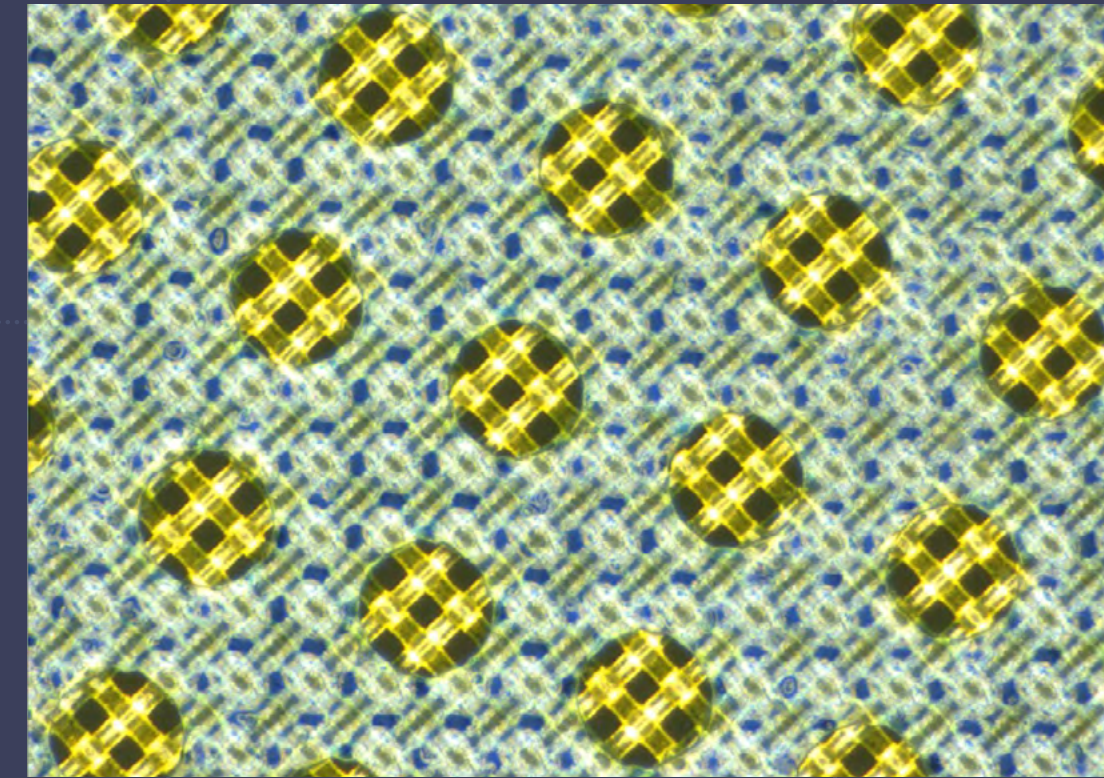

Output on the screen is executed by Planar Array of 64 lasers that work together in an even more sophisticated way to eliminate banding even with high LPI halftone images.

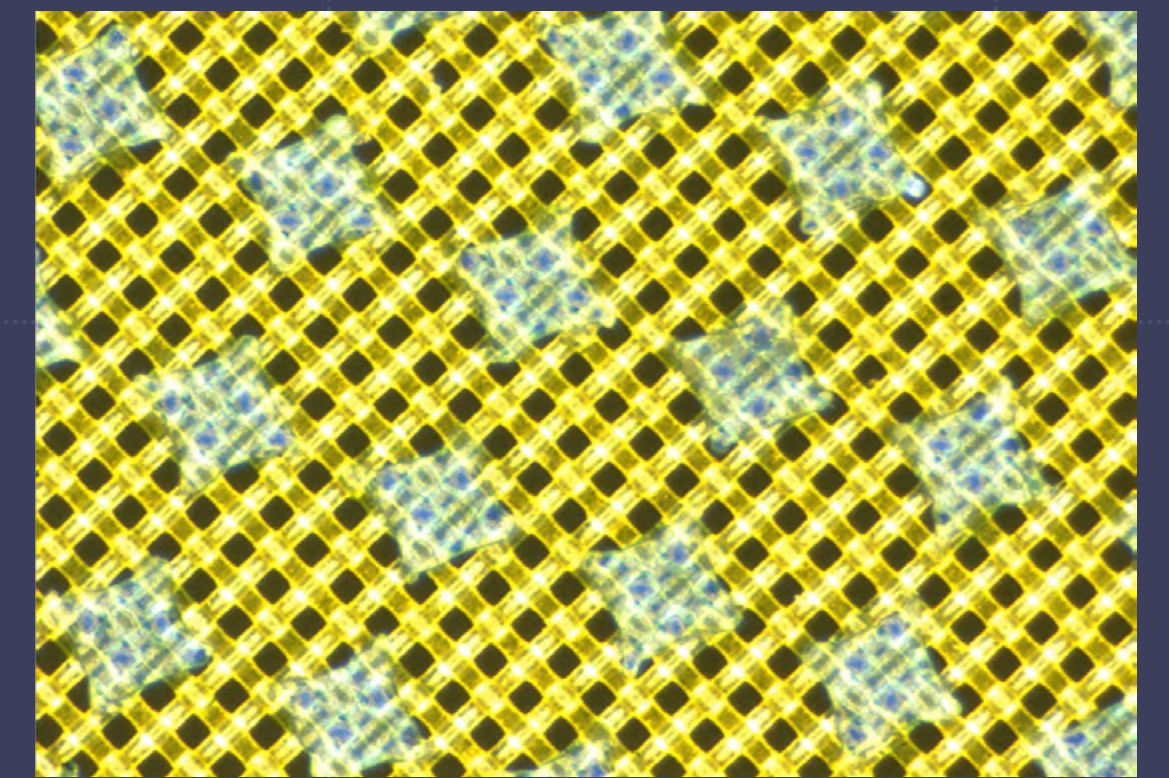

# The Door Opens on a New Era in CtS Garment Printing

85 LPI halftone textile stencils

30% gray

85% gray

The new technology is at once the most sophisticated and easiest yet to operate, with easy plug & play installation and stable long term performance – the least amount of maintenance of any system in the market.

The “set it and forget it” workflow of the LTS E70B reaches for the ideal of technology – making greater success more accessible than ever before.

EVENT INVITE

# PRINTINGUNITED EXPO

22-24 October | Orange County  
Convention Center | Orlando, Florida - USA
