

SAATI Mesh Counter

Identify Thread Counts on Unlabeled Screens and Fabric

SAATI's Mesh Count Determiner is a fast and easy way to verify your mesh count. Can be used on stretched and unstretched fabric, with or without a stencil.

You can accurately count the number of threads per inch within +/-2 in mesh counts ranging from 22–528TPI. This is accomplished by placing one of the 2 included films (22–276TPI and 274–528TPI) onto your fabric and rotating the film until the moire pattern appears next to the mesh count.

Benefits

- Save down time by eliminating mismarked frames in your inventory
- Confirm incoming frames from outside vendors
- Reduce moire by matching frames of similar thread count
- Can also be used on halftone films
- to determine if the LPI is correct
