

SAATI and SAATlstyle®

From SAATI, the Italian multinational specialized in technical fabrics, comes a functional and decorative design product with its own precise style that brings with it the characteristics of weaving and new design possibilities.

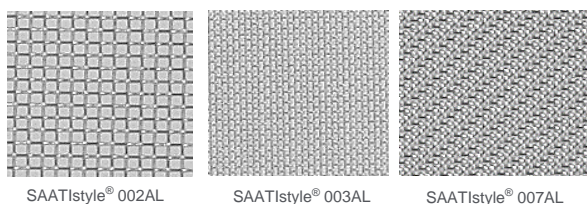

Like SAATI's other products, production for SAATlstyle® preserves the best quality polyester fabric by coating it with nanometric layers of metal.

What is SAATlstyle®

The core of SAATlstyle® is a polyester fabric produced by SAATI. It is coated with a layer of metal which gives it brilliance and makes the surface customizable with decorations.

Thanks to this feature it is easy to laminate in glass and for this reason some designs have been tested according to UNI 12543-4; UNI 12600.

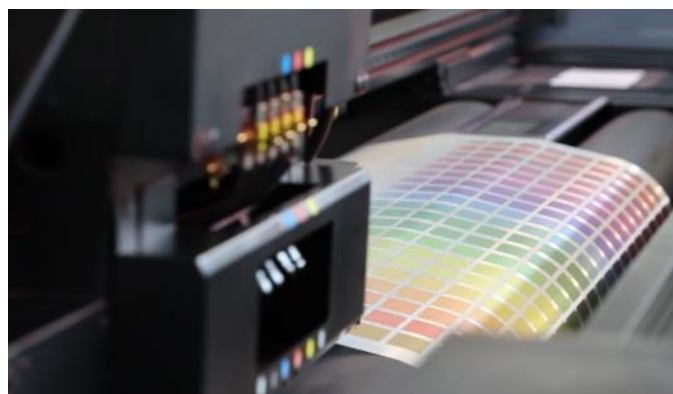

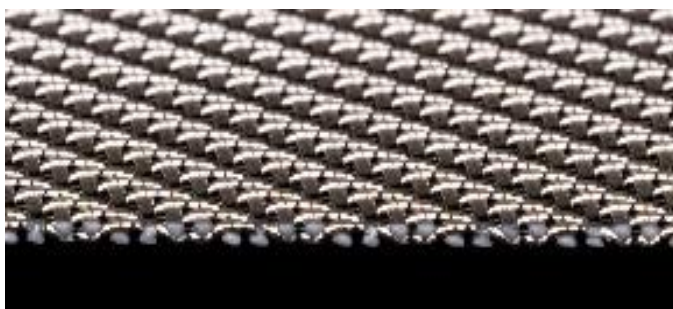

Standard Mesh Type

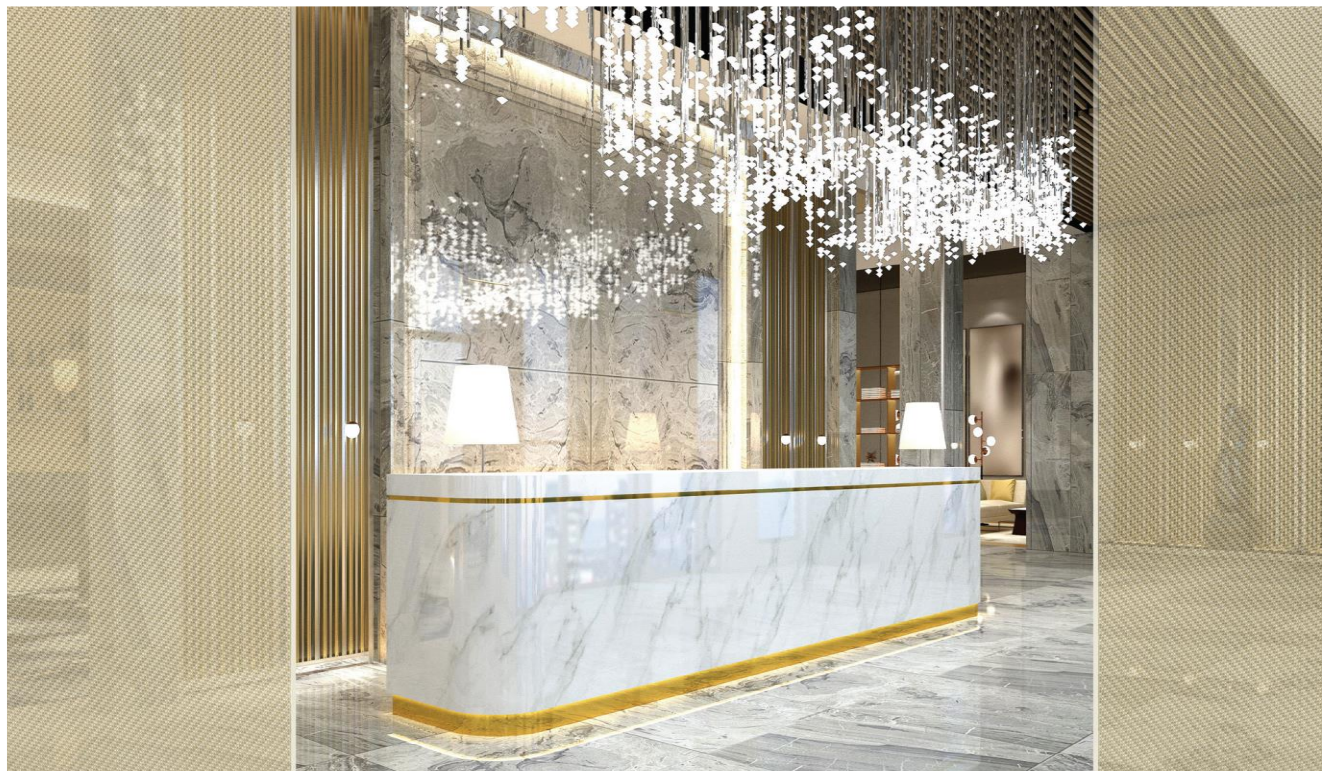

SAATlstyle® 002AL

SAATlstyle® 003AL

SAATlstyle® 007AL

We recommended to verify the actual effect of SAATlstyle fabric through a sample.

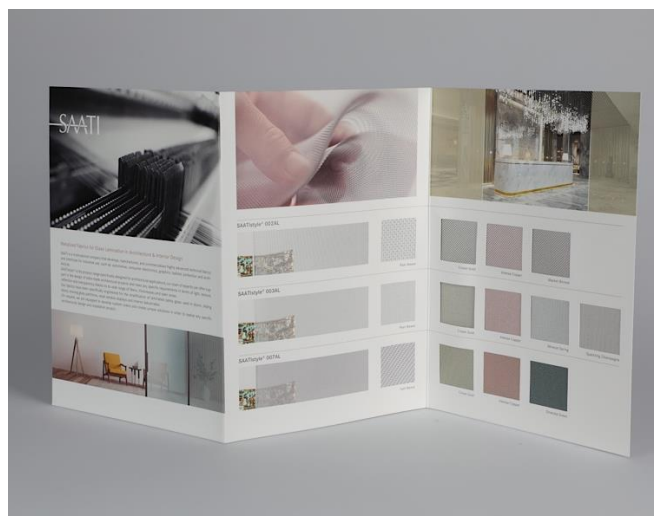

Let's Design Together!

SAATlstyle® 002AL, SAATlstyle® 003AL and SAATlstyle® 007AL allows you to incorporate designs on each of the two sides of the fabric independently, increasing the directionality of the vision and generating two faces that do not do not affect one another.

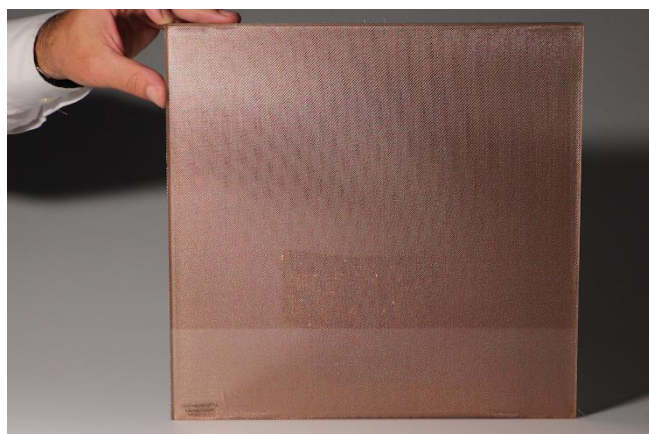

By its nature, the fabric reacts to light, going from high transparency (back light) to a strong materiality (front lighting) but always leaving the visibility unaltered (Haze 4-15%; Clarity 98-99%).

Thanks to the variety of fabric types, light transmission (TL 20-50%) and the solar factor can be calibrated with the SAATlstyle model most suited to the project.
